3. The USAA Government Securities Fixed Income Composite includes all institutional and retail portfolios invested in government securities, U.S. Treasury bills, notes, and bonds; Treasury Inflation Protected Securities (TIPS); mortgage-backed securities (MBS) backed by the Government National Mortgage Association (Ginnie Mae), the Federal National Mortgage Association (Fannie Mae), and the Federal Home Loan Mortgage Corporation (Freddie Mac); U.S. government agency collateralized mortgage obligations; securities issued by U.S. government agencies and instrumentalities; and repurchase agreements collateralized by such investments. The strategy aims to deliver total return through a high level of current income consistent with preservation of principal. Portfolios in the composite have a target average maturity of 5-10 years. The composite creation date is July 2019 and the composite inception date is March 1991.
4. The benchmark of the composite is the Bloomberg U.S. Aggregate Government Intermediate & MBS Index. The Bloomberg U.S. Aggregate Government Intermediate & MBS Index consists of intermediate U.S. Treasury and Agency unsecured notes and securities backed by pools of mortgages issued by U.S. Government Agencies, GNMA, Fannie Mae, or Freddie Mac. The benchmark returns are provided to represent the investment environment existing during the time periods shown and are not covered by the report of independent verifiers. For comparison purposes, the index is fully invested, which includes the reinvestment of income. The returns have been taken from a published source and do not include any transaction fees, management fees, or other costs. Prior to 8/24/2021, the name of this benchmark was the Bloomberg Barclays U.S. Aggregate Government Intermediate & MBS Index.
5. The internal dispersion of annual returns is measured by the standard deviation of asset-weighted gross returns of accounts included in the composite for the full year. If less than six portfolios are included in the composite for the full year, no dispersion measure is presented, as it is not considered meaningful (N/M). The three-year annualized ex-post standard deviation measures the variability of the composite's gross returns and the benchmark returns over the preceding 36-month period. It is not required to be presented for annual periods prior to 2011 or when a full three years of composite performance is not yet available.
